# Introduction / **School Performance Dashboard**

## A Report from the **University of Southern California**

In his 2011 State of the Union address, President Barack Obama declared that charter schools are a way to out-innovate and out-educate our competitors worldwide. The President believes that investment in education must be accompanied by reform, including the expansion of high-quality charter schools. President Obama has challenged states to lift limits that stifle growth among successful charter schools and has encouraged rigorous accountability for all charter schools.

This report, in its fifth year, has a similar goal of accountability in reporting school data. Now titled USC School Performance Dashboard, it draws on California school data from 2003 to 2010. For the second year, we provide an accompanying interactive report at [school-performance.usc.edu](http://school-performance.usc.edu).

### **What's New**

The big news is that the nation's financial crisis has hit California public schools. Schools have less to work with, so their financial health is not as strong as it has been in past years. *EdSource* reports that the state education budget has been cut by five percent since the recession hit, and legislators are contemplating an additional 10 percent cut. This amounts to a loss of almost \$1,200 in funding per pupil, or the equivalent of 15 teachers (salaries and benefits) in a school of 1,000 students. The bottom line: Charter schools – like all public schools in the state – have less money to save and less to carry over from year to year.

So how have charter schools responded? For one thing, they have tightened their belts. Schools have dramatically reallocated larger proportions of their operating budget into direct classroom instruction. Cuts in charters appear to be outside the classroom, such as counselors, school staff, and outreach personnel; those positions added when budgets were less lean are the first to go.

Another trend across many of the Dashboard indicators is that charters, when compared to non-charter public schools, are overrepresented at the very top and the very bottom of the performance distribution. This applies to the School Performance indicators, the Academic Momentum indicators and the School Productivity indicators. This may be due to the large increase in the number of charter schools reporting since our last Dashboard (more than 300 additional schools on some measures). Or perhaps the results relate to the aging of California's charter population: Some charter schools become high-performing as they age and learn from experience, while others flounder when faced with leadership changes and financial instability.

Regardless of the precise explanation, what's needed is an investigation into the schools at the top. What are the promising practices that lead to their high performance? Equally important, we need to pay attention to the charters at the very bottom: Who are their authorizers? What kinds of quality controls have been put in place to monitor performance? What level of performance is poor enough to revoke the charter?

## Spotlight on Charter Schools – Nationally and Locally

Across the U.S. and in California specifically, the number of charter schools has continued to grow. In fall 2010, California – home to 807 charters, more than any other state – opened 90 new charter schools: an eight percent growth. The U.S. Department of Education’s School Improvement Grants program calls charter schools an important strategy for turning around failing schools. Charters are also an option for restructuring failing schools under No Child Left Behind. We have observed significant increases of charters in a few urban California school districts, such as Oakland and Los Angeles, similar to the jump in numbers seen in Chicago, New York and Philadelphia. In those cities, districts are moving away from the common-school model. Instead, they’re moving toward a portfolio of schools that includes a variety of education providers, from traditional public schools to nonprofit organizations and charter groups.

Simultaneously, authorizers are raising their standards; they closed 160 charter schools nationally due to problems in the areas of finance, management, or poor student performance. This phenomenon has hit home with the bankruptcy of the Inner City Education Foundation (ICEF Public Schools), one of California’s largest charter management organization; its 15 charter schools targeted the African American community in South Los Angeles. Our Dashboard measures of financial health, especially the reserves and liquidity ratios, provide warnings to help authorizers put out fires before they become blazes.

### Data Challenges

Financial data has always been spotty in the USC Dashboard because of the way counties report district data to the state of California. For this year’s report, USC researchers reached out to several large urban California school districts – such as Los Angeles Unified – which had missing financial data. This generated more financial data for Dashboard users to see. We hope that this greater transparency becomes the norm: that all California counties deliver data to Sacramento in a usable form.

And due to the economic downturn, the state has cut back and slowed down calculating some measures. The state announced they will only report class size in charters every other year, not every year as in the past. Also, this year’s data are not available yet for the Teacher Qualifications Index. The state has promised the data will be released; once available, we will add the information to our Interactive Dashboard.

Louisiana is in the process of adopting a Dashboard of its own, built on California’s example. With five years of the School Performance Dashboard under its belt, California is in a position – hinging on greater transparency and cooperation from Sacramento – to lead the nation in charter school analysis.

*The USC School Performance Dashboard Research Team*

## Introduction / **Top 10 Performers**

This year, we are highlighting 10 high flyers among California's charter schools. These 10 charter schools had the highest combined ratings on the academic measures and school productivity indicators.

We included charter schools with enrollments of over 100 students and also limited our rankings to charter schools that reported data for each of the measures included – we hope this encourages others to step up their reporting!

<b>1. Heritage K-8 Charter School</b>	(Escondido)
<b>2. Rocklin Academy</b>	(Rocklin)
<b>3. Temecula Valley Charter School</b>	(Winchester)
<b>4. Aspire Vincent Shalvey Academy</b>	(Stockton)
<b>5. Aspire River Oaks Charter School</b>	(Stockton)
<b>6. Willow Creek Academy</b>	(Sausalito)
<b>7. Orange County High School of the Arts</b>	(Santa Ana)
<b>8. St. HOPE Public School 7</b>	(Sacramento)
<b>9. Aspire East Palo Alto Charter School</b>	(East Palo Alto)
<b>10. Wilder's Preparatory Academy Charter</b>	(Inglewood)

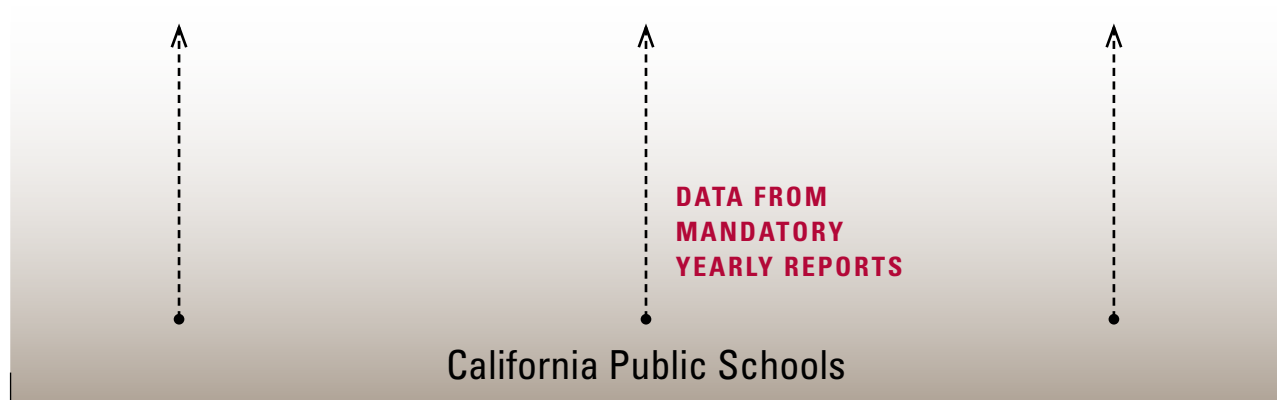

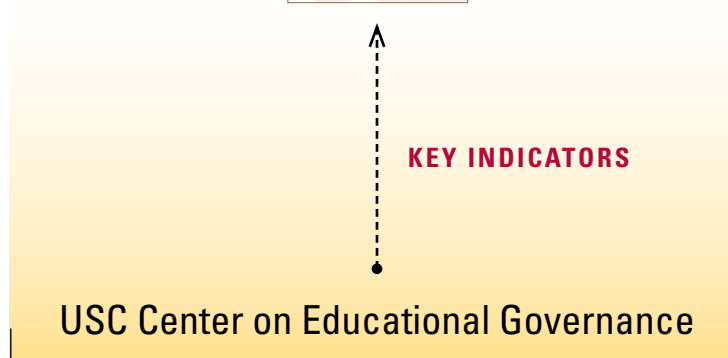

### **A few notes:**

- > Grades served varied, with four K-8 schools, five with elementary grades only, and one serving grades 7-12.
- > The schools varied in size. Rocklin Academy is the smallest, with an enrollment of 156, while the largest, Orange County High School of the Arts, serves 1417 students.
- > Four of the 10 schools are stand-alone charter schools; six are part of a network (CMO, EMO or other type of network).
- > The percentage of Free and Reduced Price Lunch students served varies from two percent to 92 percent. Five schools serve more than 50 percent FRL.
- > Nine of the 10 schools serve fewer than 10 percent English Language Learners.
- > The schools vary in age but tend to be more "mature" schools. Seven of the 10 were established 10 or more years ago.
- > Our top 10 list meshes with recognition given by others. For example, St. HOPE Public School 7 and Orange County High School of the Arts were named California Distinguished Schools in 2010 and 2009, respectively.

## USC School Performance Dashboard 2011

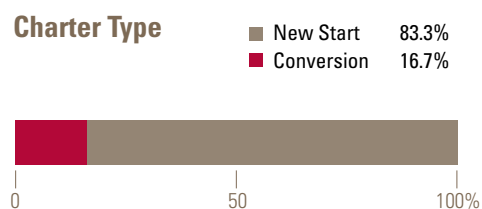

Financial Resources and Investment  
School Quality  
School Performance  
Academic Productivity

# Snapshot / California Charter Schools, 2009 to 2010

## School

Averages: School Size: **397.4** Students/Computer: **9.33 / 1**

## Staff

Averages: Students/Teacher: **21.6 / 1** Students/Admin: **274.8 / 1** Students/Staff: **739.9 / 1**

## Students

Percentages: Male: **49.3%** Female: **50.7%** Free/Reduced Lunch: **50.4%** English Learner: **15.2%**

# Snapshot Highlights / California Charter and Non-Charter Public Schools Compared, 2009 to 2010

## School Size

Charter schools' average enrollment (398 students) is smaller than that of non-charter public schools (610 students). Charter school enrollment has increased from last year's average of 382 students.

## Student/Computer Ratio

Non-charter public schools have a higher student/computer ratio – 11.4 students per computer – than do charter schools (9.3). Last year, charter schools had about seven students per computer.

## Staff Averages

The student-teacher ratio is slightly higher for charter schools (21.6 students per teacher) than for non-charter public schools (20.6). However, non-charter public schools have higher ratios of students to administrators: 411 students per administrator versus 274.8 students per administrator in charter schools. These comparisons have not changed much from last year.

## Staff Ethnicity

Compared to non-charter public schools, charter schools have higher percentages of staff members who identify as African-American (5.4% of charter school staff, 3.7% at non-charters). At non-charter public schools, 69.5% of staff report their ethnicity as white, compared to 65.7% at charter schools. These differences in staff ethnicity have changed little from since year.

## Free/Reduced Lunch

Charter schools enroll fewer students from low-income families. The percentage of students who are eligible for free or reduced lunch at non-charter public schools is 57.1% compared to 50.4% at charter schools. The percentages of low-income students in both types of public schools has increased since last year.

## English Learners

On average, charter schools have lower percentages of English Learners (15.2) than non-charter public schools (24.4). This was also true last year; however, the percentages have decreased for both charter and non-charter public schools.

## Student Ethnicity

The overall ethnic composition of charter schools is similar to that of non-charter public schools, but there are some key differences. Charter schools have nearly twice as many African-American students (13.1%) than non-charter public schools (6.8%). The percentage of white students at charter schools (32.9) is slightly higher than that of public non-charters (31.1). Non-charter public schools have higher proportions of Asian students (7.1% compared to 3.4% for charter schools) and Hispanic students (47%, compared to 41.7% in charter schools). These numbers have not changed much from last year.

## Parent Education

Parents of charter school students have received more formal education than parents of non-charter public school students. While 58.1% of students at charter schools have parents who have received some post-secondary education (attended college, graduated from college, or received graduate education), 52.2% of students at non-charter public schools have parents who have attended school beyond high school. At the same time, parents of students at non-charter schools are more likely not to have finished high school (20.8% compared to 17.7% for parents of charter school students). These numbers are similar to previous years.

# The Report / Across California

# Understanding the Charts

## Financial Resources and Investment

The Financial Indicators are calculated for charter schools only. To be included in CSI-USC, charter schools must report their financial data separately from the financial data of their district.

Each column represents one year of data.

Each color represents a range of values used in calculating the scores for the financial indicators.

n = the number of charter schools with the data necessary to be included in this ranking.

## School Quality / School Performance / Academic Productivity

All California public schools with available data are included in the calculation of these indicators.

Each column represents one year of data.

Rankings for all schools were broken into quintiles\* (equal intervals of 20 percent). If a category is greater than 20 percent, there are more charter schools in that category than non-charters. Less than 20 percent indicates fewer charters in that category than non-charters.

n = the number of charter schools with the data necessary to be included in this ranking.

The vast majority of California public schools are non-charter schools, so their data will fall close to the 20 percent intervals.

\*except for the Teacher Qualification Index

# Financial Resources and Investment

## Reserves Ratios

Charter Schools, 2003 to 2010

### Highlights

**DEFINITION:** The Reserves Ratios Index is the ratio of reserve fund balances to total expenditures. This measures the portion of total expenditures that a school has saved in reserves, and therefore reflects the ability to weather future costs even if revenue is deficient. The Reserves Ratios Index is reported as a ratio instead of a ranking, and is not compared to non-charter schools.

**TRENDS:** According to this year's data, the six-year trend of gradual improvement in charter school financial health has reversed, as reflected in the ratio of reserve fund balances to total expenditures. Proportionately fewer reserves are being carried forward, which could very well reflect reduced revenues appropriated to charter schools that are associated with California's school spending cutbacks.

# Financial Resources and Investment

## Liquidity Ratios

Charter Schools, 2003 to 2010

### Highlights

**DEFINITION:** The Liquidity Ratios Index is the ratio of a school's assets to its liabilities. This reflects the school's ability to pay off its short-term debts, as well as the ability to raise additional capital, either through selling off or borrowing against its assets. A school with a high liquidity ratio is more financially stable. The Liquidity Ratios Index is reported as a ratio instead of a ranking, and is not compared to non-charter schools.

**TRENDS:** Charter schools seem to be reversing the trend of increased financial stability as reflected in the ratio of a school's assets to its liabilities. After steady increases in this ratio from 2003-04 to 2008-09, the average liquidity ratio declined during 2009-10, reflecting some combination of relative asset loss or increase in liabilities from increased debt levels.

# Financial Resources and Investment

## Direct Classroom Investment

Charter Schools, 2003 to 2010

### Highlights

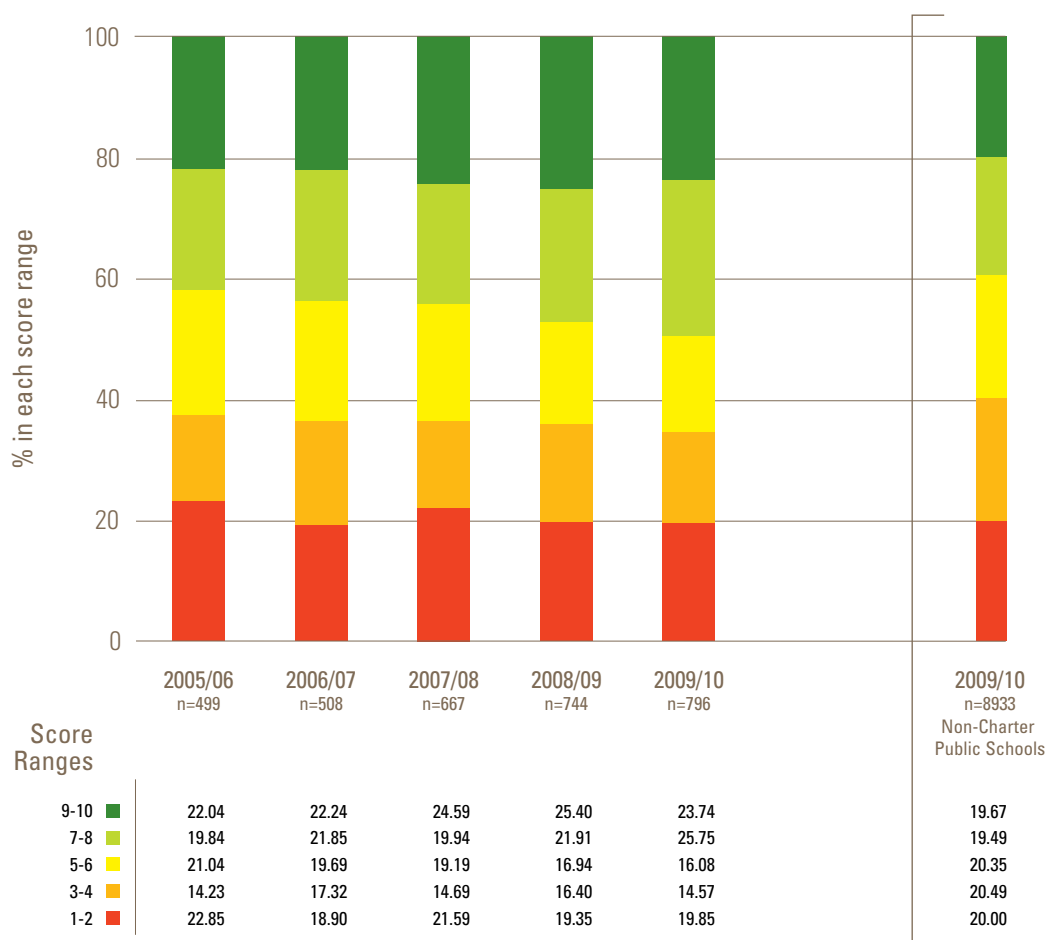

**DEFINITION:** The Direct Classroom Investment Index is the ratio of classroom investment to total revenues. Classroom investments include such expenditures as teacher salaries and benefits, textbooks, and curriculum. The Direct Classroom Investment Index is reported as a ratio instead of a ranking, and is not compared to non-charter schools.

**TRENDS:** After years of proportionate growth in indirect classroom support (investment not directly associated with instruction in classrooms), charters dramatically reallocated much larger proportions of their resources directly into classrooms. This trend reversal is most likely the result of severe belt-tightening due to revenue fall-offs. As schools reduced expenditures in response to the state funding reductions, they appeared to place a high priority on protecting classroom investments, seeking instead to cut resources outside the classroom.

# School Quality

## Teaching Resources

Charter Schools, 2005 to 2010

### Highlights

**DEFINITION:** The Teaching Resources Index reflects the ratio of certified, full-time-equivalent teachers to the number of students at a school.

**TRENDS:** The data indicate a growing differentiation among charter schools and also between charter schools and non-charter public schools. First, compared to the previous year, there are greater proportions of charter schools in the highest two categories (high ratios of teachers to students), but also greater proportions of charter schools in the lowest category (with low ratios of teachers to students). Second, despite this separation trend among charter schools, charter schools as a group report overall higher ratios of teachers to students than do non-charter public schools. One possible contributing factor to this difference may be charter schools' apparent priority of protecting classroom teaching positions from budget cuts.

# School Quality

## Teacher Qualification

Charter Schools, 2004 to 2009

### Highlights

**DEFINITION:** The Teacher Qualification Index is a measure of teacher quality that incorporates the percentage of underqualified teachers: teachers in their first or second year of teaching and teachers on emergency, intern or waiver credentials. This index is criterion-referenced, meaning that all scores can earn a score of 10.

*\*This index could not be calculated for the 2009-10 school year because the California Department of Education had not released the data at the time of publication.*

**TRENDS:** The California Department of Education has changed the way that it collects and processes the TQI data. The most current data were not available when this report went to print. When the state makes it available, USC will update the interactive Web site ([school-performance.usc.edu](http://school-performance.usc.edu)) to include this information.

# School Quality

## English Learner Reclassification

Charter Schools, 2004 to 2010

### Highlights

**DEFINITION:** The English Learner Reclassification Index ranks schools on the percentage of English Learners (EL) who are reclassified to fluent-English-proficient (FEP). Only schools which had at least 15 EL students in the previous year are included in this index.

**TRENDS:** After five years of gradual improvement in reclassifying English Learners, charter schools reversed this trend in 2009-10, with the greatest reversal seen among charter schools with the lowest levels of English Learner reclassification. Relative to non-charter public schools, there are higher proportions of charter schools with the highest levels of reclassification, but also significantly greater proportions of charter schools with the lowest levels of reclassification. One possible explanation for the dramatic increase in the proportion of charters with the lowest reclassification rates is the dramatic increase in charter schools reporting data this year (up to 638 from 353). These newly reporting charters may have had little reclassification activity prior to this year, but now are reporting that activity.

# School Performance

## API Composite

Charter Schools, 2004 to 2010

### Highlights

**DEFINITION:** The Academic Performance Index (API) measures a school's average student performance on statewide assessments across multiple content areas. The API Composite Index is a combination of several variables: API school rank, API similar-schools rank and API base score from the previous year.

**TRENDS:** Charter schools' API scores continue to fluctuate. This year shows an increase in the number of schools performing in the highest ranking and a decrease in the proportion of charter schools performing in the lowest ranking. In comparison to non-charter public schools, higher proportions of charters are performing in the highest category. At the same time, however, higher proportions of charters are performing in the bottom two API composite categories relative to non-charter public schools.

# School Performance

## Adequate Yearly Progress Charter Schools, 2004 to 2010

### Highlights

**DEFINITION:** The Adequate Yearly Progress (AYP) Index ranks schools on several components of AYP: whether they met AYP goals in math and English/language arts and the percentage of their students who were rated proficient or above in these areas.

**TRENDS:** There continues to be improvement at the top among charter schools, but the problems at the bottom persist. Higher proportions of charter schools are finding their way into the top two AYP performance categories, and smaller proportions are showing up in the bottom two categories combined. However, the proportion of charter schools in the very bottom category continues to grow. In comparison to non-charter public schools, greater proportions of charter schools occupy the top two AYP performance categories, but they are also overrepresented in the bottom two AYP performance categories.

# School Performance

## Academic Momentum

Charter Schools, 2004 to 2010

### Highlights

**DEFINITION:** The Academic Momentum Index measures changes in a school's student achievement over time, reflecting whether a school is improving, declining or consistent. It combines three measures of academic progress: annual change in the percentage of students proficient in math; annual change in the percentage of students proficient in English/language arts; and annual API growth.

**TRENDS:** Among charters, there is steady improvement in academic momentum over the past three years. This is the case across all five categories of academic momentum. Generally, charter schools outperform non-charter public schools in all categories except in the lowest category, where higher proportions of charter schools have the lowest academic momentum.

# Academic Productivity

## English/Language Arts Productivity

Charter Schools, 2004 to 2010

### Highlights

**DEFINITION:** The English/Language Arts Productivity Index ranks schools on their student performance on standardized tests of English/language arts compared to schools within the same district and districts with similar per-pupil spending.

**TRENDS:** Among charters, a growing trend of separation between the top and bottom performers persists. Greater proportions of charter schools are showing up in the top two categories of ELA productivity and in the bottom two categories of ELA productivity. When compared to non-charter public schools in 2009-10, charter schools have lower proportions in the bottom four categories and higher proportions in the top category of ELA productivity.

# Academic Productivity

## Math Productivity

Charter Schools, 2004 to 2010

### Highlights

**DEFINITION:** The Math Productivity Index ranks schools based upon math standardized test performance, comparing charter schools to non-charter schools within the same district and districts with similar per-pupil spending.

**TRENDS:** Charter schools have made gains in math productivity, decreasing the proportion of schools in the bottom two productivity categories and increasing the proportion of schools in the top two categories. Nonetheless, charter schools still lag behind non-charter public schools with disproportionately fewer charters schools in each of the highest four productivity categories and significantly greater proportions in the lowest productivity category.

# Academic Productivity

## School Productivity

Charter Schools, 2004 to 2010

### Highlights

**DEFINITION:** The School Productivity Index ranks schools based upon their API scores, comparing schools to non-charter public schools within the same district and districts with similar per-pupil spending. The API uses standardized tests to assess schools on various subject areas.

**TRENDS:** Charter school productivity has improved overall, with decreasing proportions of schools in the bottom two productivity categories and increasing proportions in the top two categories. When compared to non-charter public schools, charter schools are disproportionately represented at the extremes of high and low productivity, again reflecting the greater separation between “best” and “worst” found in several other performance indicators. General productivity gains in all schools may result from recent budget reductions, thereby reducing the denominator of the productivity ratio without immediately influencing the numerator.

# The Report / Individual Schools

# Understanding the Tables / Individual Charter School Scores

The tables on pages 25 to 48 show scores for individual charter schools, organized alphabetically within each county.

	Reserves Ratios Index	Liquidity Ratios Index	Direct Classroom Investment Index	Teaching Resources Index	Teacher Qualification Index	EL Reclassification Index	API Composite Index	Adequate Yearly Progress Index	Academic Momentum Index	English/LA Productivity Index	Math Productivity Index	School Productivity Index
<b>Alameda County</b>												
Achieve Academy	0.25	1.62	0.79	4		9	6	6	6	4	8	7
Alameda Community Learning Center				2		10	7	9	8	10	8	9
American Indian Public Charter	0.84	6.05	0.74	7		2	10	10	7	10	10	10
American Indian Public Charter School II	0.44	2.44	0.52	10		10		1		1	1	1
American Indian Public High	0.91	3.89	0.47	6				10	9	10	10	10
ARISE High	-0.19	0.65	0.75	6		2	1	1	4	1	1	1
Aspire Berkley Maynard Academy	0.1	1.47	0.83	7		2	8	7	3	6	7	8

The colors represent the categories found in the charts on pages 10 to 21.

A blank cell denotes insufficient data.

Charter schools included in this report were identified as 'Active' for the 2009-2010 school year by the CDE Charter School Division. Of those, only charter schools with data are included in this section.

Both district and CDE data were used in these calculations. For additional information on rankings and sources used, see Appendices B and C.

# Appendices / Final Credits

## Appendix A / Data Sources and Terms

### **Academic Performance Index (API)**

The API measures the academic performance and growth of public schools in California based on a variety of tests and establishes a statewide ranking of schools according to those scores. Most schools have an API, an overall state ranking, a ranking in comparison to 100 similar schools, and growth targets for the following year.

*Further information can be found at <http://www.cde.ca.gov/ta/ac/ap/>*

### **Accountability Progress Report (APR)**

The APR provides information on state API results, federal AYP results and federal program improvement information.

*Further information can be found at <http://www.cde.ca.gov/ta/ac/ar/index.asp>*

### **Adequate Yearly Progress (AYP)**

A goal of the 2001 federal No Child Left Behind Act (NCLB) is to require schools and districts to measure and report students' annual progress toward proficiency in English/language arts and mathematics. Progress is based on whether the school or district has met its Annual Measurable Objectives, demonstrated 95 percent participation on standardized tests, achieved its target on the API and, for high schools, met target graduation rates.

*Further information can be found at <http://www.cde.ca.gov/ta/ac/ay/>*

### **Charter School Alternative Form Data**

California Education Code began requiring charter school financial reporting during fiscal year 2003-2004. Charter schools can choose to use the Charter School Alternative Form. Charter schools that do not report in the Standardized Account Code Structure format must use the Alternative Form.

*Further information can be found at <http://www.cde.ca.gov/fg/sf/fr/csalternative.asp>*

### **California Basic Educational Data System (CBEDS)**

CBEDS contains information that the California Department of Education collects each October from school districts, schools and certificated staff. The CBEDS data include staffing information and student characteristics collected on three forms: the School Information Form, the Professional Assignment Information Form and the County/District Information Form.

*Further information can be found at <http://www.cde.ca.gov/ds/sd/cb/>*

### **DataQuest**

DataQuest is a database developed and maintained by the Department of Education that provides reports about California's schools and school districts. It contains a variety of information, including school performance indicators; student and staff demographics; expulsion, suspension, and truancy data; and a variety of test results.

*Further information can be found at <http://www.cde.ca.gov/ds/sd/cb/dataquest.asp>*

## Appendix A / Data Sources and Terms

### **Language Census (R30-LC)**

This census collects data on students with non-English-language backgrounds and includes information regarding English learner (EL) and fluent-English-proficient (FEP) students.

*Further information can be found at <http://www.cde.ca.gov/ds/dc/lc/>*

### **Professional Assignment Information Form (PAIF)**

PAIF data are collected annually from California teachers and concern the qualifications, demographics and teaching assignments for teachers in California's public schools.

*Further information can be found at <http://www.cde.ca.gov/ds/sd/df/files/paif.asp>*

### **School Accountability Report Card (SARC)**

California state law requires all public schools receiving state funding to prepare a SARC. The SARC is intended to provide the public with important information about individual public schools, including school mission and progress towards goals; academic and demographic data; school safety and climate for learning; teacher and staff information; and fiscal and expenditure data. Although charter schools are required to prepare a SARC as a condition of receiving state funds, they are not required to comply with various SARC content and distribution requirements contained in the California Education Code.

*Further information can be found at <http://www.cde.ca.gov/ta/ac/sa/>*

### **School Information Form (SIF)**

The SIF is used to collect data specific to schools on the number of classified staff, school enrollment, high school graduates, enrollment in selected high school courses, career-technical education enrollment, dropouts, alternative education, technology, education calendars and No Child Left Behind reporting requirements.

*Further information can be found at <http://www.cde.ca.gov/ds/sd/cb/studentdatafiles.asp>*

### **Standardized Account Code Structure (SACS)**

The SACS is a uniform and comprehensive chart of accounts for classifying the financial activities of California local school districts and county offices of education. Phase-in began in 1997-1998; by 2003-2004, all local educational agencies (LEAs) reported in SACS.

*Further information can be found at <http://www.cde.ca.gov/ds/fd/fd/>*

### **Teacher Qualification Index (TQI)**

The TQI is a standardized rating system that shows the credential status and experience level of teachers at public K-12 schools in California. Schools receive a rating from 1 to 10 based on the percentage of teachers at the school who are formally qualified. Schools with higher percentages of underqualified teachers have lower TQI ratings. Ken Futernick, a former professor at California State University, Sacramento, developed this measure.

*Further information can be found at <http://www.edfordemocracy.org/>*

## Appendix B / Creating the Dashboard

*The following section describes the measures we used to assess the performance of charter schools in California. It explains what data we used and how we calculated values for each of the 12 indices.*

### Financial Resources and Investment

#### Reserves Ratios Index

The Reserves Ratios Index is the ratio of reserve fund balances to total expenditures. This measure of charter school financial stability counts available funds to cover unexpected costs or to compensate if future revenues are less than expected.

#### Liquidity Ratios Index

The Liquidity Ratios Index, which measures assets to liabilities, is a measure of a charter school's financial health. It indicates a school's ability to meet its liabilities as covered by its assets. A school with a high liquidity ratio is better able to raise additional capital, either through selling off or borrowing against its assets.

#### Direct Classroom Investment Index

The Direct Classroom Investment Index is the ratio of classroom investment to total revenues. Classroom investments include such expenditures as teacher salaries and benefits, textbooks, and curriculum.

### School Quality

#### Teaching Resources Index

The Teaching Resources Index provides a ratio of full-time equivalent teachers to students. A teacher is an individual who holds a position requiring certification, and who provides direct instruction to students.

#### Teacher Qualification Index

The Teacher Qualification Index measures teacher quality based on credentials and experience. Each school begins with a score of 10; this is lowered if any of its teachers possess an emergency, intern or waiver credential or if 20 percent or greater of its teaching staff is first- or second-year teachers. As this indicator is criterion-referenced, it is possible for all schools to receive a ranking of 10.

#### English Learner Reclassification Index

The English Learner Reclassification Index represents the frequency with which a school transitions students from English Learner (EL) to fluent-English-proficient (FEP).

# Appendix B / Creating the Dashboard

## School Performance

### API Composite Index

The API Composite Index summarizes school performance on various statewide standardized tests that cover a variety of academic subjects. This index combines API school rank, API similar schools rank and API base score from the previous year.

### Adequate Yearly Progress Index

Adequate Yearly Progress (AYP) Index rankings include whether schools met AYP goals in math and English/language arts and the percentage of students rated as proficient or above in these subject areas.

### Academic Momentum Index

The Academic Momentum Index combines three measures of academic progress: annual change in the percentage of students proficient in math; annual change in the percentage of students proficient in English/language arts; and annual API growth. It measures changes in a school's student achievement over time.

## Academic Productivity

### English/Language Arts Productivity Index

The English/Language Arts Productivity Index measures academic achievement on standardized tests of English/language arts as compared to non-charter schools within the same district and districts with similar per-pupil spending.

### Math Productivity Index

The Math Productivity Index measures how well a charter school performs on math standardized tests compared to non-charter schools within the same district and districts with similar per-pupil spending.

### School Productivity Index

School Productivity Index rankings compare a school's API scores to those of schools within their district and similarly funded districts. The API rates school performance in a variety of subject areas.

## Credits / About the USC School Performance Dashboard

In its fifth annual report, the Center on Educational Governance has built upon a foundation of national research and data analysis to produce the USC School Performance Dashboard (formerly known as “CSI–USC”). This year’s report, like last year’s, includes performance ratings for individual charter schools.

Since last year’s report was released, the CEG research team conducted a series of focus groups to gauge the value and utility of multiple measures of school performance. We also closely monitored who used the information, and we talked with users about what is needed to make the site more accessible and useful. Based on user feedback, this year’s report highlights the top 10 charter schools in California, based on academic and school productivity measures. We also added a filter so that users can search schools by the size of their English language learner populations. In the future, we will expand the filters to allow for searches based on the size and age of the school, its demographics, and whether it is affiliated with a charter management organization.

As a result of our meetings with USC Dashboard consumers, we discovered that in addition to charter school leaders, parents shopping for schools for their children were active visitors to the Web site, along with foundations that have invested in charter schools. Users pointed out the difficulty of accessing the Web site through the USC Web site and so we decided to launch an independent site devoted exclusively to the USC Dashboard: [school-performance.usc.edu](http://school-performance.usc.edu).

The USC School Performance Dashboard is just one project among the Center on Educational Governance’s commitment to research examining the quality, accountability and sustainability of public schools.

CEG’s Director, Priscilla Wohlstetter, Ph.D., the Diane and MacDonald Becket Professor of Educational Policy, serves as Co-Principal Investigator on the U.S. Department of Education’s national evaluation of charter schools. CEG has also developed and produced stakeholder satisfaction surveys for parent, students and staff, as well as guidebooks on charter school partnerships, parent involvement, and the scale-up of charter management organizations.

For more information about CEG research, products and services, and staff, consult the Center on Educational Governance Web site: <http://www.usc.edu/cegov/>

### The USC School Performance Dashboard Research Team

Jeimee Estrada, MPP; Guilbert C. Hentschke, Ph.D.; Brynne Keith-Jennings, MPP; Archana Patel, MPP; Joanna Smith, Ph.D.; Priscilla Wohlstetter, Ph.D.

**Editor:** Elaine Beebe

**Founding researchers:** Richard S. Brown, Ph.D.; Sunny Liu, Ph.D.

The Center on Educational Governance (CEG), located at the University of Southern California, focuses on the linkages between policy, governance, and the improvement of urban schools and the systems within which they operate. CEG researchers use an interdisciplinary approach to study current policy solutions to the educational issues posed by diverse urban communities—locally, nationally and globally. The main activities of the center are: (1) engaging in rigorous quantitative and qualitative research studies of policy problems; (2) building a knowledge base to provide researchers, educators, parents and policymakers with new tools and strategies for improvement; and (3) working in partnership with educators and policymakers to use research to improve policy and practice. Project highlights include studies of school networks, publicprivate partnerships, urban school district reform, and accountability, governance and leadership in charter schools.
